

[CFI EDGE SERVER™]

Secure File Transfer Proxy Server

CFI Edge Server™ is an appliance-based proxy server that provides a secure gateway for bi-directional communications between enterprise file transfer systems and external systems and business partners. Edge Server is the only secure file transfer gateway appliance that works with all major file transfer protocols to facilitate secure data transfer across the Demilitarized Zone (DMZ) and directly into an organization's corporate network.

Deployment Options

- Standalone: Edge Server can be installed as a standalone appliance and used in conjunction with your existing file transfer system.
- With CFI: Edge Server can be installed with the CyberFusion Integration Suite (CFI)™ to secure file transfers across all major platforms (Windows, Linux, UNIX, iSeries, and the Mainframe) as well as over the Internet.

Ready to Install, Secure Proxy Server

With growing enterprise security risks and increasing pressures from regulatory mandates (Sarbanes-Oxley, GLBA, HIPAA, PCI-DSS, etc.), companies are demanding additional layers of security to protect their business data. For many companies exchanging files with customers, suppliers, and business partners – it has become a prerequisite. Edge Server resides within the DMZ and enables enterprises to safely house their servers and all associated data inside the perimeter of the corporate network ('the edge' of the network). By deploying Edge Server as their file transfer gateway, companies can ensure that data is never stored in the DMZ and never exposed to associated vulnerabilities. Edge Server is delivered as a ready-to-install, rack-mountable appliance for quick and easy deployment in any technology environment.

Key Benefits

- No data is ever written to or stored in the DMZ
- No authentication credentials are exposed in the DMZ
- Works with all major file transfer protocols
- Hardened Linux operating system offers plug-and-play functionality
- Support for multiple DMZ environments
- Easy-to-use, browser-based configuration manager

Hardware Specifications

- Chassis-1U Rackmount
- Rail Kit
- Intel CPU-QuadCore Xeon 2 GHz
- 2 Kingston 1GB DIMMs
- 2 1GB Network Cards
- 2 4GB Solid State Disk
- Intel DVD/CDR
- Intel Bezel

Operating System

- Linux 2.6 kernel

Protocol Support

- CFI
- HTTPS
- HTTP
- FTPS
- SFTP
- FTP
- AS2
- SSH

About Proginet

Proginet Corporation, Beta Systems' Partner for File Transfer Solutions, offers universal, multi-platform software solutions for fast, secure, and inexpensive file transfers both inside and outside the enterprise. Hundreds of companies worldwide rely on Proginet's CyberFusion Integration Suite (CFI)® and Slingshot™ solutions to conduct business more efficiently while protecting customer data and limiting the risks associated with sharing proprietary information with partners and colleagues around the globe. With over 20 years of experience in the managed file transfer arena, Proginet's global customer base spans more than 30 countries and includes many Fortune 500 companies. Headquartered in New York, the company is publicly traded under the symbol [OTCBB: PRGF].
